

Intentional Editing

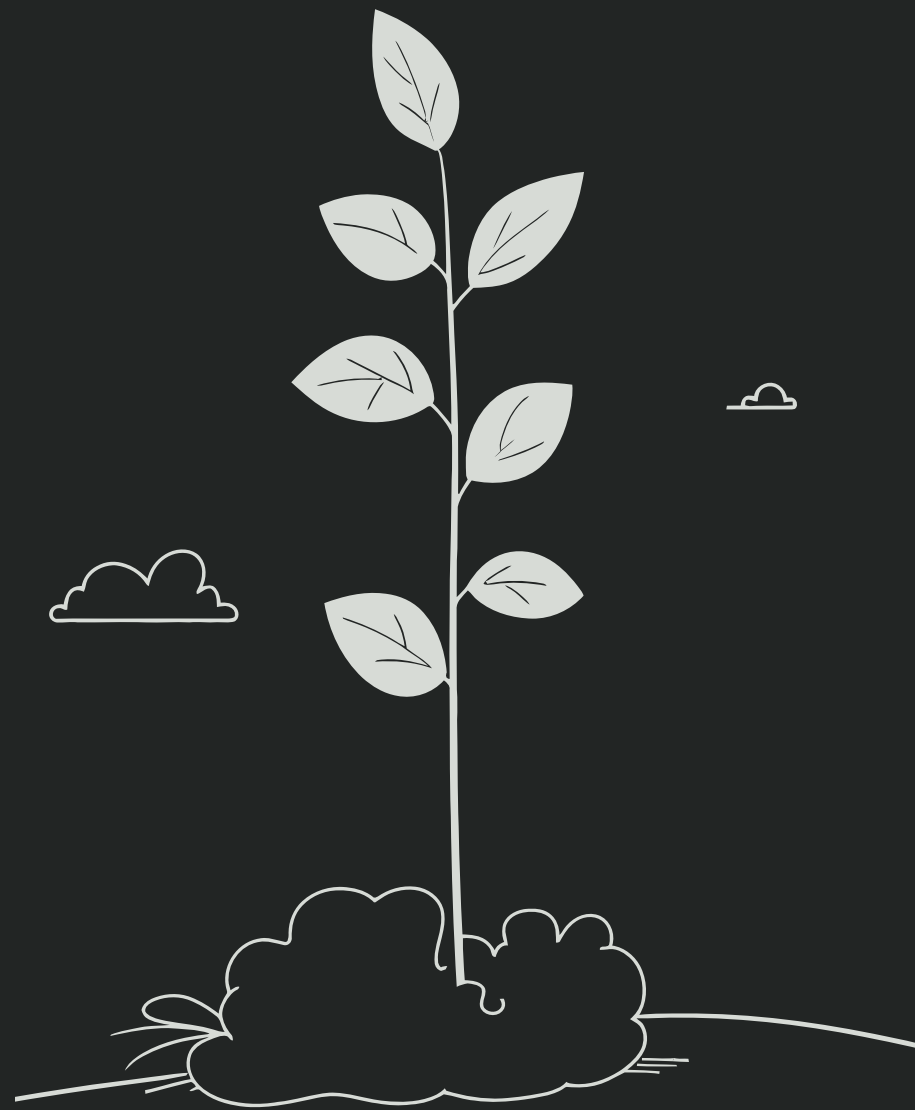

by Artem

The "Secret" To My Style:

Intention

- Don't add random stuff that you're not even sure what it does exactly, this is what makes your edits unpolished
- Fewer elements, each one is thought through
- If your project file is messy, the final result will be messy too

#1: Unlink Video & Audio

You have waaaaay more control

`Cmd + L` or `Ctrl + L` to unlink

#2: Audio Track Mixer

Audio effects are essential, but PLEASE let's not apply them to individual clips.

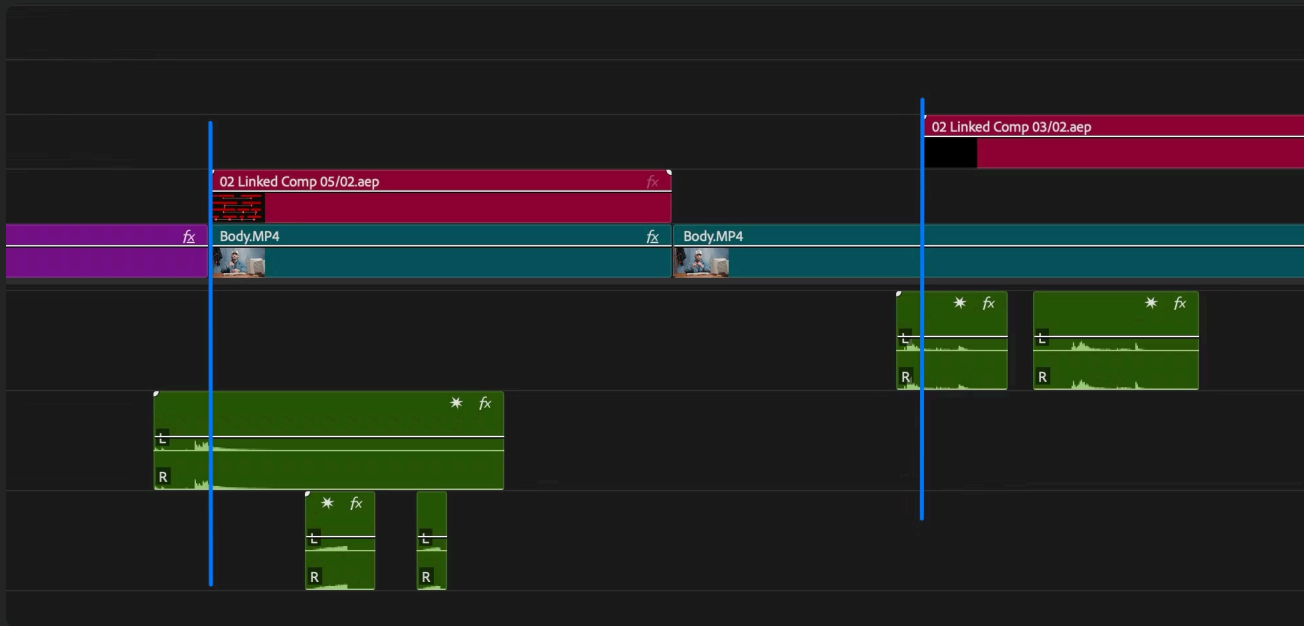

Audio Track Mixer applies the effects to the whole track.

New microphone = new track

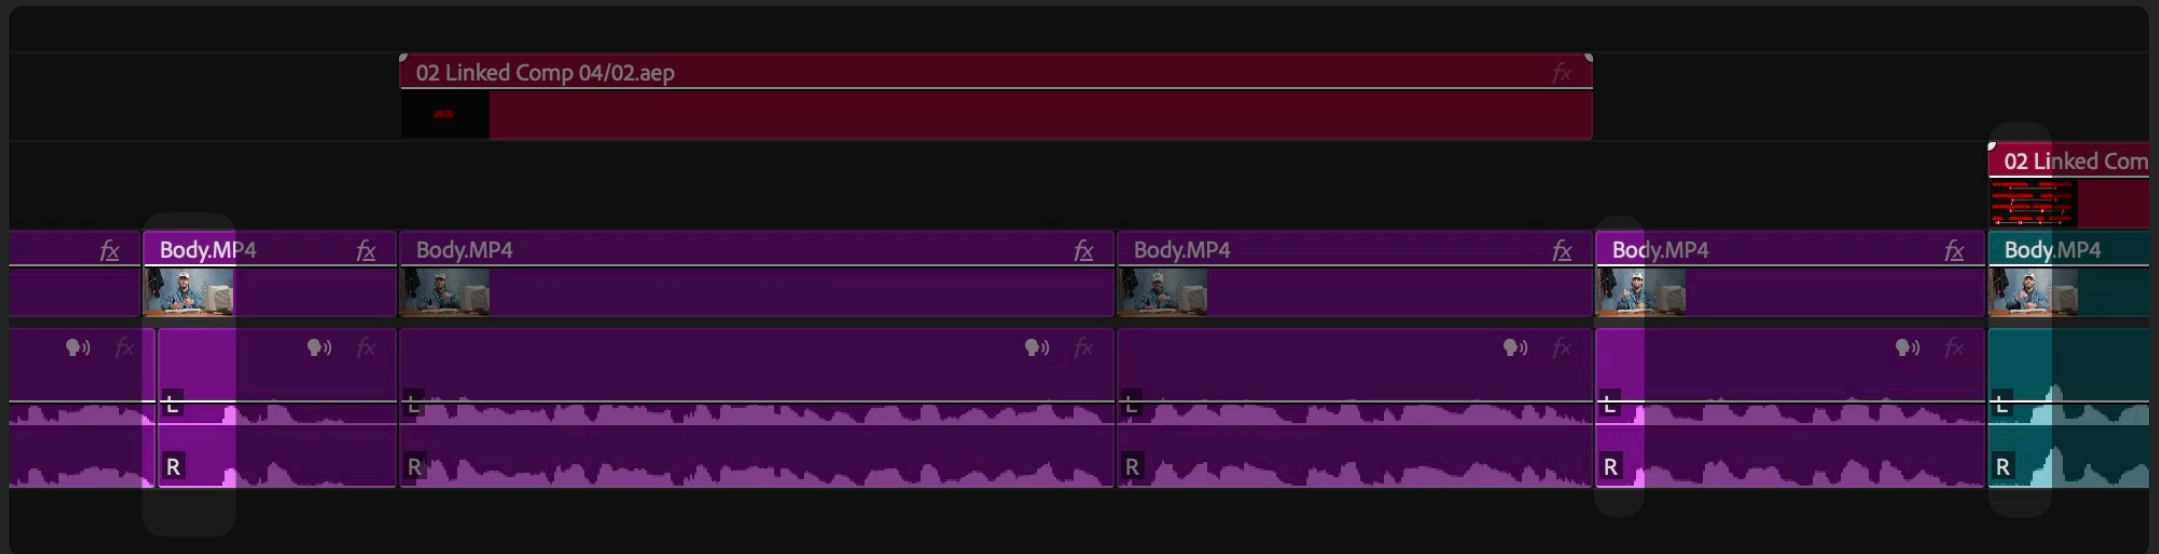

#3: Offset Clicks SFX

Mine always happen 2-5 frames before visuals:

Mouse clicks especially, IRL there's a delay between the click and the action happening on screen.

#4: Don't Cut At The Waveform

Not gonna say names but pretty sure all editors are scared to do this because of some other gurus.

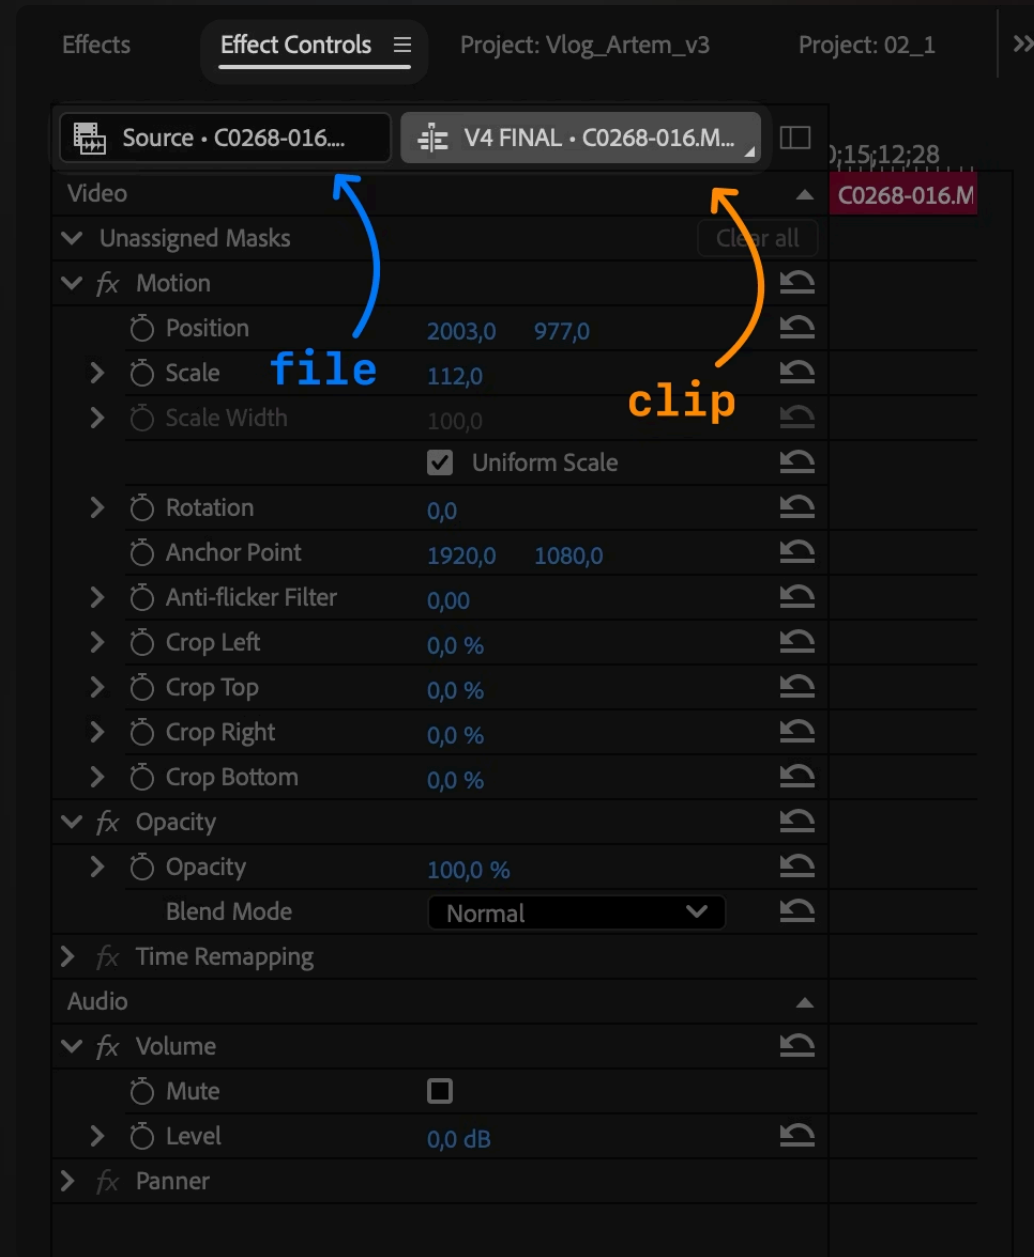

#5: Separate Audio Layers

You have waaaaay more control

Cmd + L or Ctrl + L to unlink

#6: Color Correct The Footage File

- Let's please not use adjustments layers for CC
- Here's the difference between color correcting the clip and the file:

#7: Don't Add Fade Transitions To Everything

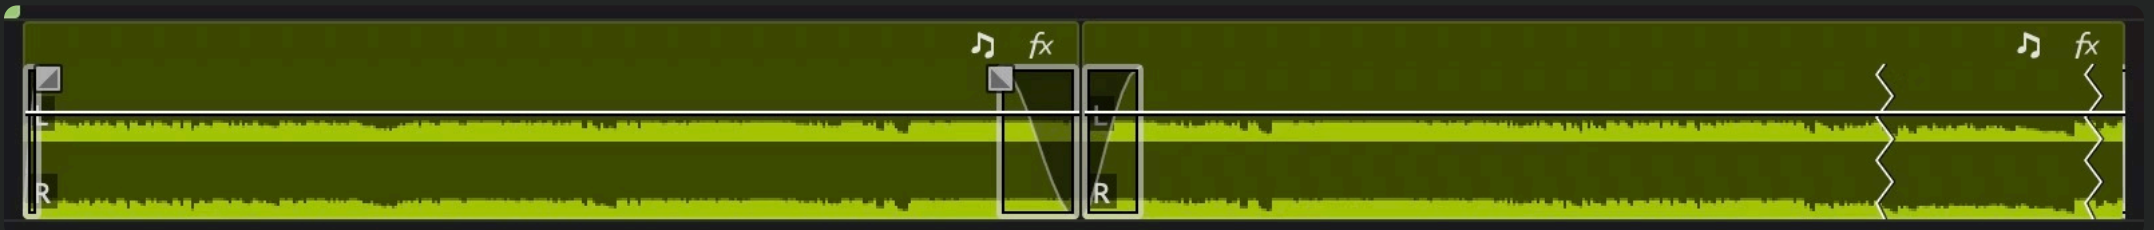

These SFX are supposed to sound SHARP

#8: Don't Get Sloppy With Music

Wtf is this?

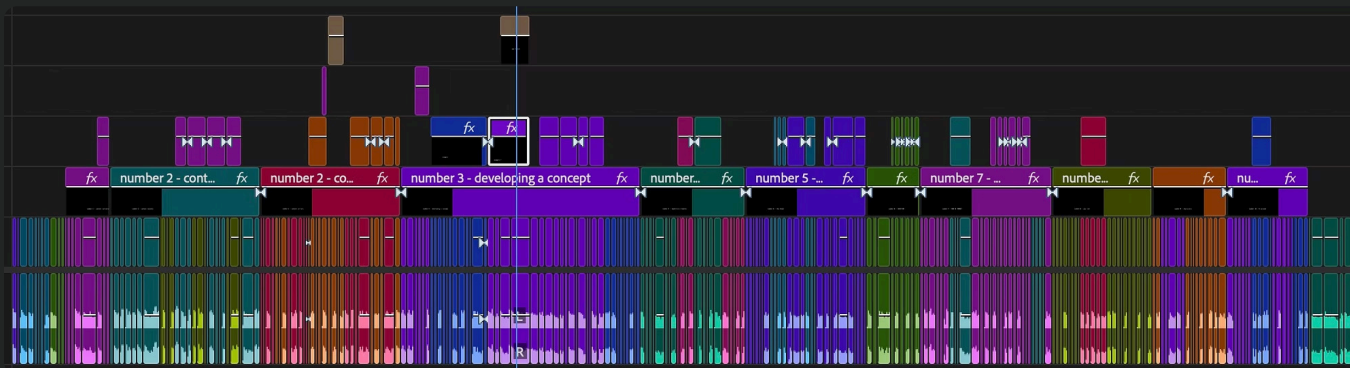

This is NOT a good music switch:

#9: Organize The Footage Properly

- Proper folder structure (if lots of footage files)
- VO with the labelling (for B-rolls too)

#10: Sync Audio & Video Properly

- Use words that start with "b" or "p"
 - "But" is the easiest one
- Align the waveform with the mouth opening
